The invention discloses an isolated nucleic acid molecule encoding a human hydroxymethylgilutaryl-coenzyme A (HMG-CoA) synthase which is important in cholesterologenesis. The polynucleotide and polypeptide are useful as models for the development of human therapeutic targets, to aid in the identification of therapeutic proteins and as targets for the development of human therapeutic agents that modulate the activity of the polypeptide in cells and tissues. The polynucleotide is useful for monitoring the effectiveness of modulating compounds on the expression or activity of the enzyme gene in clinical trials and in treatments, in diagnostic assays for qualitative changes in expression of enzyme nucleic acid, to detect mutations in enzyme genes and gene expression products,

New isolated nucleic acid molecule encoding hydroxymethylglutaryl-CoA synthase, useful as model for the development of human therapeutic targets and for identifying therapeutic proteins.

 such a mRNA, for testing an individual for a genotype and as a diagnostic target that can be used to tailor treatment in an individual. The polypeptide is useful to raise antibodies, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as markers for tissues in which the corresponding protein is preferentially expressed (e.g. carrinomas), in biological assays related to members of the synthase subfamily, in drug screening assays, in competition binding assays, in cell-based or cell-free systems, in pharmacogenomic analysis and for treating a disorder characterised by an absence of, inappropriate, or unwanted expression of the polypeptide. The sequence presented is the human HMG-COA synthase protein, the gene for which is located on chromosome 5

New isolated human synthase peptide and gene encoding the enzyme, useful as models for developing human therapeutic targets, aid in the identification of therapeutic proteins and as therapeutic targets.

Claim 1;

that shows a high degree of similarity to human cytoplasmic 3-hydroxy-3 methylglutaryl coenzyme A (HMG-CoA) synthase. The invention also consisted solvention. Both the polypeptide and polynucleotide sequences encoding the novel enzyme of the cinvention. Both the polypeptide and polynucleotide sequences are useful cas models for the development of human therapeutics, for identifying therapeutic proteins, as targets for development of human therapeutics are useful cases to identify other family members of related sequences. The copolypeptide is useful to raise antibodies or to elicit another immune care polypeptide is useful to raise antibodies or to elicit another immune care polypeptide is useful to raise antibodies or to elicit another immune care polypeptide is useful to raise antibodies or to elicit another immune care polypetide is useful to raise antibodies or to elicit another immune care polypetide is useful to raise antibodies or to elicit another immune care polypetide is useful to raise antivolution of the protein in the satural state, or an altered form that causes the specific disease or pathology cassociated with the synthase, to screen a compound for the ability to state, or an altered form that causes the specific disease or pathology cassociated with the synthase, to screen a compound for the ability to the amount of the pathology of the human synthase gene in clinical trials or in a treatment regimen, in caid that leads to a pathology, for testing an individual for a genotype that while not necessarily causing a disease, nevertheless affects the creatment modality, and as antisense constructs to control human synthase care pathology, for testing an individual for a genotype care expression in cells, tissues and organisms. The present sequence capse expression in cells, tissues and organisms. The present invention relates to the isolation of a novel human that shows a high degree of similarity to human cytonlasmic 3-h

 The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV. CC antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV. CC antiparkinsonian and antilipaemic activities, and can be used in gene CC therapy. NOVX proteins are useful for treating or preventing a pathology cassociated with a NOVX protein in humans and for treating a syndrome CC associated with the human disease. NOVX nucleic acids, proteins and antibodies can be used in the treatment and diagnosis of cardiomyopathy. CC atherosclerosis, hypertension, congenital heart defects, aortic stenosis. CC valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, CC disease, tuberous sclerosis, scleroderma, obesity, transplantation, CC disease, NIDS, bronchial asthma, Cronn's disease, multiple sclerosis, nost of cardiang approachila. Ancertain disease, maltiple sclerosis, or ordering approachila, asthma, croner, fertility, haemophilia, cancer, associated cachexia, cancer.

 Novel human proteins and nucleic acid encoding the proteins, useful diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.
 infectious disease, anorexia, cancer-associated cachexia, cancer, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present invention. ABR54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention.

Novel human proteins and nucleic acid encoding the proteins, useful for diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.

Claim 1; Page 242; 460pp; English

hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, antidiabetic, antidipetic, immunosuppressive, cytostatic, antidiabetic, antidipetic, immunosuppressive, cytostatic, cantidiabetic, antidifertility, haemostatic, antiinflammatory, anti-HIV, cantiparxinsonian and antilipaemic activities, and can be used in gene ctherapy. Novy proteins are useful for treating or preventing a pathology cassociated with a Novy protein in humans and for treating a syndrome cassociated with be human disease. Novy nucleic acids, proteins and can the used in the treatment and diagnosis of cardiomyopathy, catheroscies, hypertension, congenital heart defects, acrtic stenosis, congenital disease, tuberous sclerosis, scleroderma, obesity, transplantation, congenital adrenal hyperplasia, prostate cancer, diabete, metabolic disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercasqulation, idiopathic thrombocytopenic purpura, graft versus host cisease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis, chiectious disease, anorexia, cancer associated cachexia, cancer, accompositic disease, parkinson's disease, immune disorders, cancer, accompositic disease, parkinson's disease, immune disorders.

CC Alzheimer's disease, parkinson's disease, immune disorders.

CC Alcheimer's disease, parkinson's disease, immune disorders.

CC Accessed to Accessed to the present for human Novx sequences, which are used in examples from the present invention with the human Nov35b protein in the exemplification of the present invention. The present invention describes isolated human NOVX proteins, where 1 to 42. ACC62236 to ACC622345 encode the human NOVX proteins given i ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardi hypotensive, dermatological, anorectic, immunosuppressive, cytostati Sequence 520 AA, cardiant,

CT The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatheroscierotic, cardiant, CC hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, CC antiparkinsonian and antilipaemic activities, antiinflammatory, anti-HIV, CC antiparkinsonian and antilipaemic activities, and can be used in gene CC therapy. NOVX proteins are useful for treating or preventing a pathology cassociated with the human disease. NOVX mucleic acids, proteins and can be used in gene CC associated with the human disease. NOVX mucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC athorosclerosis, hypertension, congenital heart defects, aortic stenosis, CC valve disease, tuberous sclerosis, scleroderma, obssity, transplantation, CC disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, CC disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, CC disease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis, cancer, acceptate, cancer, albeimer's disease, parkinson's disease, immune disorders, cancer, ACC62346 to ACC62465 represent PCR primers and probes for human NOVX CC sequences, which are used in examples from the present invention with the human NOV35b protein in the exemplification of the present invention with the human NOV35b protein in the exemplification of the present invention.

Novel human proteins and nucleic acid encoding the proteins, useful for diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.

Claim 1; Page 246; 460pp; English.

cc hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, cantidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, cc antiasthmatic, metabolic, immunomodulator, neuroprotective, notropic, cc antiparkinsonian and antilipaemic activities, and can be used in gene ct therapy. Novx proteins are useful for treating or preventing a pathology cassociated with a Novx protein in humans and for treating a syndrome cc associated with a human disease. Novx nucleic acids, proteins and cc antibodies can be used in the treatment and diagnosis of cardiomyopathy, cc atheroscierosis, hypertension, congenital heart defects, aortic stenosis, cc valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, cc ongenital adrenal hyperplasia, prostate cancer, diabetes, metabolic cc disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, cc disease, AlDS, bronchial asthma, Crohn's disease, multiple sclerosis, ci infectious disease, anorexia, cancer-associated cachexia, cancer, cl zheimer's disease, anorexia, cancer-associated cachexia, cancer, cc haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. Cc haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. Cc haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. Cc haematopoietic a human trypsinogen protein given in comparison with the human Nov35b protein in the exemplification of the present invention. The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62245 encode the human NOVX proteins given in ABR543167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, hypotensive, dermatological, anorectic, immunosuppressive, cytostatic,

Novel human proteins and nucleic acid encoding the proteins, useful for diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.

Claim 1; Page 241; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC antidiabetic, antiinfertility, haemostatic, immunosuppressive, cytostatic, CC antidiabetic, metabolic, immunomodulator, neuroprotective, nootropic, antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, CC antiparkinsonian and antilipaemic activities, and can be used in gene CC therapy. NOVX proteins are useful for treating or preventing a pathology associated with the human disease. NOVX nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC antibodies, therous sclerosis, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, fertility, haemophilia, CC hypercoagulation, idiopathic thromboytopenic purpura, graft versus host confectious disease, anorexia, cancer-associated cachexia, cancer, according to a disease, anorexia, cancer-associated cachexia, cancer, CC lalbeimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, parkinson's disease, immune disorders, cancer, CC Alzheimer's disease, parkinson's disease, immune disorders, cancer, CC Alzheimer's disease, parkinson's disease, immune disorders, cancer, CC Alzheimer, disease, immune disorders, with the human trypsinogen protein given in comparison with the human NOVX the human trypsinogen protein given in compariso

 ACC62336.
 for
```

The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC antiatibhetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, CC antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, CC antiparkinsonian and antilipaemic activities, and can be used in gene CC associated with a NOVX protein in humans and for treating a pathology associated with the human disease. NOVX nucleic acids, proteins and CC associated with the human disease. NOVX nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC atherosclerosis, hypertension, congenital heart defects, acrtic stenosis, CC valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, CC disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, CC hypercoagulation, idiopathic thrombocytopenic purpura, graft versus host CC disorders, proteinal asthma, Croin's disease, multiple sclerosis, CC Alzheimer's disease, Parkinson's disease, immune disorders X. CC Alzheimer's disease, Parkinson's disease, immune disorders X. CC Alzheimer's disease, Parkinson's disease, immune disorders X. CC ARS4277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention. Sequence 520 AA;

Novel human proteins and nucleic acid encoding the proteins, useful idiagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders. for

Claim 1; Page 244; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC5236 to ACC52345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC antiathatic, antiinflammatory, anti-HIV, CC antiathatic, metabolic, immunosuppressive, cytostatic, CC antisthmatic, metabolic, immunomodulator, neuroprotective, noctropic, CC antisthmatic, metabolic, immunomodulator, neuroprotective, noctropic, CC antiparkinsonian and antilipaemic activities, and can be used in gene CC associated with a NOVX protein in humans and for treating a pathology associated with the human disease. NOVX nucleic acids, proteins and CA antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC arboral hyperplasis, prostate cancer, diabetes, metabolic congenital adranal hyperplasis, prostate cancer, diabetes, metabolic congenital adranal hyperplasis, prostate cancer, diabetes, metabolic chypercoagulation, idiopathic thromborytopenic purpura, graft versus host infectious disease, anorexia, cancer-associated cachexia, cancer, CC hypercoagulation, idiopathic thromborytopenic purpura, graft versus host infectious disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alzheimer's disease, Sequence 520 AA;

The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC delimed are allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence Which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent CC that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially composition of a polynucleotide sequence which is differentially CC expressed in an animal subjected to pain, a method for identifying a compound which regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a continuity in an animal of one or more of the polynucleotides, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more of the polypeptides or their antibodies. The polynucleotide or the compound that composition comprising the one or more constriction in spinal segmental nerve injury (CNIMI), a medicament for treating CC pain (e.g. spinal segmental nerve injury (SNI)) in an animal (e.g. gene construction constriction constriction in the sequence presented is a human protein (shown in Table 2 of therapy). The sequence presented is a human protein (shown in Table 2 of

The invention discloses a composition comprising two or more isolated rat CC or human polymucleotides or a polymucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polymucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a comprision of the polymucleotide sequence that increases or decreases the expression of the polymucleotide sequence that is differentially expressed in neuronal tissue of a first animal composition of a polymucleotide sequence which is differentially expressed in dentifying a compound which regulates the expression of a polymucleotide sequence which is differentially composition, a method for identifying a compound which regulates the expression of the polymucleotides of the compound that regulates the activity of one or more of the composition, a method for identifying a pharmaceutical composition, a conjugation of a pharmaceutical composition composition the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more compound useful in treating the composition composition comprising the one or more compound that set is activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (chung), chronic constriction conjury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene compound confication) which is differentially expressed during pain. Note: the specification, but was obtained in electronic form directly from WIPO at fig. introduced at for this patent did not form part of the printed composition is differentially expressed during pain.

 modulator. The modulator may have cytostatic, antithyroid, antidiabetic or ophthalmological activity. The method is useful for treating a subject having a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example, Grave's disease and diabetic retinopathy. The present sequence is the amino acid sequence of the novel isolated human protein 9389 of the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Direct Submission

L. Submitted (13-MAY-2003) BD Biosciences Clontech, 1020 East Meadow Circle, Palo Alto, CA 94303, USA

This CDS clone is a part of a collection of human full length expression clones generated by BD Biosciences Clontech and the expression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion(TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame. Clone distribution: http://bioinfo.clontech.com/orfclones.

2068 bp mRNA linear PRI 30-9
Homo appiens 3-hydroxy-3-methylglutaryl-Coenzyme A synthase
(soluble), mRNA (cDNA clone IMAGE:2819708), partial cds.
 Submitted (15-NOV-2000) National Institutes of Health, Mammalian Gene Collection (MGC), Cancer Genomics Office, National Cancer Institute, 31 Center Drive, Room 11A03, Bethesda, MD 20892-2590,
 Email: cgapbs-r@mail.nih.gov
Tissue Procurement: DCTD/DTP
 NIH-MGC Project URL: http://mgc.nci.nih.gov
On Aug 20, 2003 this sequence version replaced gi:12653064

 The invention discloses an isolated nucleic acid molecule encoding a CC human hydroxymethylglutaryl-coenzyme A (HMG-COA) synthase which is CC important in cholesterologenesis. The polymuclectide and polypeptide are useful as models for the development of human therapeutic targets, to aid development of the control of the control of the control of human therapeutic targets for the CC in the identification of therapeutic proteins and as targets for the CC polypeptide in cells and tissues. The polymuclectide is useful for control of the enzyme gene in clinical trials and in treatments, in CC diagnostic assays for qualitative changes in expression of enzyme nucleic such a mRNA, for testing an individual for a genetype and as a diagnostic can be useful to raise antibodies, as reagent in assays CC designed to quantitatively determine levels of the protein in biological competition binding assays, in cell-based or restromas), in drug screening assays, in cell-based or cell-free systems, in CC competition binding assays, in cell-based or cell-free systems, in CC absence of, inappropriate, or unwanted expression of the polypeptide. The competition binding assays in cell-based or cell-free systems, in CCC absence of, inappropriate, or unwanted expression of the polypeptide. The competition binding assays in cell-based or cell-free systems, in CCC absence of, inappropriate, or unwanted expression of the polypeptide. The for which is located on chromosome 5

The present invention relates to the isolation of a novel human enzyme CC that shows a high degree of similarity to human cytoplasmic 3-hydroxy-3-CC methylglutaryl coenzyme A (HMG-COA) synthase. The invention also CC discloses polymucleotide sequences encoding the movel enzyme of the CC invention. Both the polympeptide and polymucleotide sequences are useful CC as models for the development of human therapeutics, for identifying CC therapeutic proteins, as targets for development of human therapeutic bases to identify other family members of related sequences. The CC polypeptide is useful to raise antibodies or to elicit another immune CC levels of the protein in assays designed to quantitatively determine CC levels of the protein in biological fulleds, as markers for tissues in CC which the corresponding protein is preferentially expressed, in drug CC compounds that modulate synthase activity of the protein in its natural CC state, or an altered form that causes the specific disease or pathology associated with the synthase, to screen a compound for the ability to plantate or inhibit interaction between the synthase protein and a compound that normally interaction between the synthase protein, and in pharmacogenomic analysis. The polymucleotide is useful for monitoring the effectiveness of modulating compounds on the expression or activity of the muman synthase gene in clinical trials or in a treatment regimen, in CC diagnostic assays for qualitative changes in a human synthase nucleic actid that leads to a pathology, for testing an individual for a genotype
 New isolated human synthase peptide and gene encoding the enzyme, useful as models for developing human therapeutic targets, aid in the identification of therapeutic proteins and as therapeutic targets.

밁 δ

Novel human proteins and nucleic acid encoding the proteins, useful for diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.

Claim 20; Page 245-246; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, continidabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, CC antiathmatic, metabolic, immunomoulator, neuroprotective, nootropic, cartiparkinsonian and antilipaemic activities, and can be used in gene CC associated with a NOVX protein in humans and for treating a pathology associated with the human disease. NOVX nucleic acids, proteins and can be used in the treatment and diagnosis of cardiomyopathy, attherosclerosis, hypertension, congenital heart defects, actic stenosis, valve disease, tuberous sclerosis, scleroderma, obesity, transplantation, CC ongenital adtranal hyperplasia, prostate cancer, disbetes, metabolic congenital adtranal hyperplasia, prostate cancer, disbetes, metabolic confermital actival theory of the cardiomyopathy, infectious disease, another according a parkinson, congenital activation, disease, another accordiated acceptation, indopathic thrombocytopenic purpura, graft versus host conferences, which are used in rexamples from the base of the present invention.

CC Acc62346 to Acc62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present incomparison with the human NOV35b protein in the exemplification of the present invention.

```
The present invention describes isolated human NOVX proteins, where X is CC 1c 42. ACC62236 to ACC62245 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, CC antiathmatic, metabolic, immunosuppressive, cytostatic, CC antiathmatic, metabolic, immunomodulator, neuroprotective, noctropic, CC antisthmatic, metabolic, immunomodulator, neuroprotective, noctropic, CC antiparkinsonian and antilipaemic activities, and can be used in gene CC therapy. NoVX proteins are useful for treating or preventing a pathology consisted with the human disease. NOVX nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC atheroscis, hypertension, congenital heart defects, aortic stenosis, valve disease, tuberous sclerosis, scleroderma, obseity, transplantation, CC disease, tuberous sclerosis, scleroderma, obseity, transplantation, CC disease, miltiphy proplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, cancer, diabetes, metabolic congenital acreal hyperplasia, cancer associated cachexia, cancer, CC alheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alheimer's disease, anorexia, cancer-associated cachexia, cancer, CC Alseimer's protein and camples from the present invention.

CC ARB54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention.

Novel human proteins and nucleic acid encoding the proteins, useful for diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.

Claim 20; Page 242-243; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC hypotensive, dermatological, anorectic, immunosuppressave, cytostatic, CC antidabetic, antiinfertility, haemostatic, neuroprotective, nootropic, CC antiparkinsonian and antilipaemic activities, and can be used in gene CC therapy. NOVX proteins are useful for treating or preventing a pathology associated with the human disease. NOVX nucleic acids, proteins and CC atherosciated with the human disease. NOVX nucleic acids, proteins and CC atheroscietosis, hypertension, congenital heart defects, aortic stenosis, CC valve disease, tuberous sclerosis, prostate cancer, disectes, meoplasm, lymphoma, uterus cancer, disectes, metabolic congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, cancer associated cachexia, cancer, accer, accer, accer, disease, and disease, anorexia, cancer-associated cachexia, cancer, cancer, disease, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, accer, a

CC hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, cantidabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, CC antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, cantiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, cantiparkinsonian and antilipaemic activities, and can be used in gene continuous control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the second control of the se Alzheimer's disease, Parkinson's disease, immune disorders, Alzheimer's disease, Parkinson's disease, immune disorders, Anaematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present invention. ABR54277 represents a human trypsinogen protein given in comparison when human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the exemplification of the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in the present inventing the human NOV35b protein in The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in ABR54167 to ABR54276. NOVX sequences have antiatheroscierotic, cardiant, in comparison with present invention

Novel human proteins and nucleic acid encoding the proteins, useful diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders. for

Claim 20; Page 241; 460pp; English.

CC The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatheroscierotic, cardiant, CC ABR54167 to ABR54276. NOVX sequences have antiatheroscierotic, cardiant, CC ABR54161, antiatheroscierotic, immunosuppressive, cytostatic, CC antiasthmatic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, CC antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, CC antiparkinsonian and antilipaemic activities, and can be used in gene C therapy. NOVX proteins are useful for treating or preventing a pathology CC associated with a NoVy protein in humans and for treating as yndrome CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC atherosclerosis, hypertension, congenital heart defects, aortic stenosis, CC valve disease, tuberous sclerosis, scleroderma, obseity, transplantation, CC disease, tuberous sclerosis, scleroderma, obseity, transplantation, CC disease, hold, bronchial asthma, Crom's disease, multiple sclerosis, CC infectious disease, anceraia, cancer-associated cachexia, cancer, CC Alzheimer's disease, Parkinson's disease, immune disorders, cancer, CC Alzheimer's disease, Parkinson's disease, immune disorders, cancer, CC Alzheimer's disease, Parkinson's disease, immune disorders, cancer, CC Alzheimer's disease, Parkinson's disease, immune disorders, cancer, CC Alzheimer's disease, parkinson's disease, immune disorders, cancer, CC Alzheimer's disease, and transplantation. CC Alzheimer's disease, and transplantation. CC Cancer, which are used in examples from the present invention. CC Alzheimer's disease and an examples from the present invention.

Novel human proteins and nucleic acid encoding the proteins, useful for diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.

Claim 20; Page 242; 460pp; English.

The present invention describes isolated human NOVX proteins, where X is CC 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in CC ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant, CC antidiabetic, antiinfertility, haemostatic, immunosuppressive, cytostatic, CC antidiabetic, antiinfertility, haemostatic, neuroprotective, nootropic, antiparkinsonian and antilipaemic activities, and can be used in gene CC antiparkinsonian and antilipaemic activities, and can be used in gene CC therapy. NOVX proteins are useful for treating or preventing a pathology cassociated with the human disease. NOVX nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, and the rosclerosis, hypertension, congenital heart defects, aortic stenosis, CC valve disease, tuberous sclerosis, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic congenital adrenal hyperplasia, prostate cancer, fertility, haemophilia, CC disorders, neoplasm, lymphoma, uterus cancer, fertility, haemophilia, CC disease, anorexia, cancer, sociated cachexia, cancer, CC disease, anorexia, cancer, congenitation, disease, anorexia, cancer, sociated cachexia, cancer, CC disease, anorexia, cancer, sociated cachexia, cancer, CC disease, parkinson's disease, multiple sclerosis, CC disease, parkinson's disease, and metabolic syndrome X. CC accer, baematopoietic disorders, dyslipidaemias, and metabolic syndrome X. CC Accessed to Accessed parkinson's disease, invention. CC Abrabaman NOVXS sequences, which are used in examples from the present invention with the human NOV35b protein in the exemplification of the present invention.

CC hypotensive, dermatological, anorectic, immunosuppressive, cytostatic, cantialsthmatic, metabolic, immunosuppressive, cytostatic, antiinferthlity, haemostatic, antiinflammatory, anti-HTV, cc antiasthmatic, metabolic, immunosupulator, neuroprotective, notropic, cantiasthmatic, metabolic, immunosupulator, neuroprotective, notropic, cc antiasthmatic, metabolic, immunosupulator, neuroprotective, notropic, cc antiasthmatic, metabolic, immunosupulator, neuroprotective, notropic, cc therapy. Novx proteins are useful for treating or preventing a pathology cassociated with a NoVX protein in humans and for treating a syndrome cc associated with the human disease. NOVX nucleic acids, proteins and cantibodies can be used in the treatment and diagnosis of cardiomyopathy, catherosels can be used in the treatment and diagnosis of cardiomyopathy, catherosels of cardiomyopathy, cc atherosels hypertension, congenital heart defects, actric stenosis, cc congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic cc disease, theorous sclerosis, prostate cancer, graft versus host cc disease, AIDS, bronchial asthma, Crohn's disease, multiple sclerosis, confectious disease, anorexia, cancer-associated cachexia, cancer, althemory a disease, anorexia, cancer associated cachexia, cancer, althemory a disease, anorexia, cancer associated cachexia, cancer.

 Alzheimer's disease, Parkinson's disease, immune disorders, hasmatopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX sequences, which are used in examples from the present invention. ABR54277 represents a human trypsinogen protein given in comparison with the human NOV35b protein in the exemplification of the present invention
 The present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in ABR54167 to ABR54276. NOVX sequences have antiatherosclerotic, cardiant,
 Claim 20; Page 246; 460pp; English.
 Novel human proteins and nucleic acid encoding the proteins, useful for diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders.
 WPI; 2003-313241/30.

Novel human proteins and nucleic acid encoding the proteins, useful diagnosis, treatment and prevention of disorders involving the human protein or nucleic acid e.g. cardiac and neurological disorders. human for

Claim 20; Page 244; 460pp; English.

Critic present invention describes isolated human NOVX proteins, where X is 1 to 42. ACC62236 to ACC62345 encode the human NOVX proteins given in Critical ACC6236 to ACC62345 encode the human NOVX proteins given in Critical ACC6236 to ACC62345 encode the human NOVX proteins given in Critical ACC6236 to ACC62345 encode the human NOVX proteins given in Critical ACC6236 to ACC62345 to ACC62345 to ACC62345 to ACC62345 to ACC62345 proteins are useful for treating or preventing a pathology cassociated with the human disease. NOVX nucleic acids, proteins and can be used in gene associated with the human disease. NOVX nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, and the rosciated with the human disease. NOVX nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, and the crosciated with the human disease. NOVX nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, congenital heart defects, aortic stenosis, congenital heart defects, aortic stenosis, congenital heart defects, aortic stenosis, congenital adrenal hyperplasia, prostate cancer, diabetts, metabolic congenital adrenal hyperplasia, prostate cancer, fertility, haemophilia, congenital adrenal hyperplasia, cancer, fertility, haemophilia, conference, anticontain, cancer, are present chromosociated cachexia, cancer, all proteins and constant protein given in comparison with the human NOVX to ACC62465 represent PCR primers, and metabolic syndrome X. ACC62346 to ACC62465 represent PCR primers and probes for human NOVX the human NOV35b protein in the exemplification of the present invention.

CC hypotensive, dermatological anorectic, immunosuppressive cytostatic, antidiabetic, antiinfertility, haemostatic, antiinflammatory, anti-HIV, CC antiasthmatic, metabolic, immunomodulator, neuroprotective, nootropic, antiparkinsonian and antilpaemic activities, and can be used in gene CC therapy. Novx proteins are useful for treating or preventing a pathology CC associated with a Novx protein in humans and for treating a syndrome associated with the human disease. Novx nucleic acids, proteins and CC antibodies can be used in the treatment and diagnosis of cardiomyopathy, CC athorosis, hypertension, congenital heart defects, aortic stenosis, congenital heart defects, aortic stenosis, congenital adrenal hyperplasia, prostate cancer, diabetes, metabolic CC disorders, meoplasm, lymphoma, uterus cancer, fertility, haemophilia, hypercoagulation, idopathic thrombocytopenic purpura, graft versus host CC infectious disease, anorexia, cancer-associated cachexia, cancer, calzhemer's disease, anorexia, cancer-associated cachexia, cancer, CC haematopoietic disorders, dyslipidaemias, and metabolic syndrome X. ACC62346 to ACC62465 represent PC primers and probes for human NOVX ce gequences, which are used in examples from the present invention with the human NOV35b protein in the exemplification of the present invention.

 This invention relates to a novel method of treating a human subject having a tumourigenic disorder or angiogenic disorder, caused by aberrant gene expression or activity of an isolated protein, by administering a modulator. The medulator may have cytostatic, antitithyroid, antidiabetic or ophthalmological activity. The method is useful for treating a subject having a tumourigenic or angiogenic disorder, in particular for treating cancer (for example breast cancer, colon cancer, lung cancer or prostatic cancer) and, for example, Grave's disease and diabetic retinopathy. The present sequence is a DNA sequence which encodes the novel isolated human protein 9389 of the invention.
 10-APR-2002;

 The invention relates to a composition comprising several cDNAs that are differentially expressed in a liver disorder. The composition is useful cc differentially expressed in a liver disorder. The composition is useful creating liver disorder such as hyperlipidaemia, hypertension, type cII disabetes, tumours of the liver and disorders of the inflammatory and commune response. The composition is useful for a high-throughput method cc figure and compounds to identify a ligand which cc specifically binds a CDNA. A protein encoded by the CDNA is useful for a cc compounds to identify at least one ligand which specifically binds the crompounds to identify at least one ligand which specifically binds the crompounds to identify at least one ligand which specifically binds the crompounds in molecules or compounds under conditions to allow specific binding, and detecting specific binding between the protein and a composition is useful for detecting and composition detecting and composition detecting and composition detecting and composition detecting and composition detecting and composition detecting and composition

 Scoring table:
 Sequence:
 Perfect score:
 OM protein - nucleic search, using frame_plus_p2n model
 Total number of hits satisfying chosen parameters:
 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: pXX-Asc; Site 1: EcoR I; Site 2: Not I;
/UI-R-FJO is a cDNA library containing the following
tissue(s): rat embryo. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT773-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is CATCTCTACT. This library
was created for the University of Iowa Program for Rat
Gene Discovery and Mapping (Val Sheffield, Bento Soares
and Tom Casavant)"

Site 2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel.First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site.Double strand cDNA was size selected according to mRNA size fraction, ligated with Ecor I adaptor, digested with NotI and then cloned directionally into pyx-Asc vector. The library tag sequence located between the Not I site and the polyA tail is CGAACTGAAT. This library was created for the University Iowa Brain Anatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institute of Mental Health (NIMH), Hemin Chin, Ph.D.,
